On Wednesdays
10:00-11:30 in **Cologne**
Room: 567, Philosophikum

live broadcast

18:00-19:30 local time
in **Tokyo** and **Osaka**

Japan and Germany share common challenges caused by demographic change. **Keio University**, Tokyo, and the **University of Cologne** foster cutting-edge research on issues of **aging** and **longevity**. This joint lecture-series offers a comparative synopsis of recent research results.

Keio University (Tokyo) – one of the University of Cologne's eldest partner universities (since 1981) and the No.1 private University in Japan – is UoC's **Global Network Partner** in Japan.

Longevity, aging and **demographic change** are transversal interdisciplinary key research topics both at Keio University and the University of Cologne.

Both have **centers of excellence** in the **life sciences** and **medicine**, focusing on biological and medical issues of aging.

Both encourage wide-ranging research activities in **social sciences** and **economics** on issues of demographic change.

This joint lecture series presents the research results of experts from both Universities, shedding light on major questions and challenges of aging societies by providing **answers from Japan and Germany**.

These unique sessions are held by two lecturers each time – one from **Tokyo** and one from **Cologne** – brought together via live broadcasting, followed by a Q&A.

Enjoy an intercontinental perspective on some of the most pressing problems of our time!
